EDUCATION

Bachelor of Science, Computer Science

Aug 2023 - May 2025

CSUMB | Salinas, CA

- Concentration in Software Engineering focused on designing, developing, and deploying software across diverse platforms using modern tools and collaborative methodologies.

CSin3 program

Aug 2022 - May 2025

- Accepted into a competitive accelerated program, enabling completion of a Bachelor's in Computer Science in 3 years. The program emphasizes both theoretical knowledge and practical coding skills.

Skills

Full-Stack Web Development · Mobile App Development · API Design & Integration · Database Management · Version Control (Git) · Object-Oriented Programming · Frontend & Backend Development · Cross-Platform Development

Projects/Experience

Otter Connect – Software Developer

Jan 2025 - May 2025

- Led a 3-person team to build a Matching engine for Otter Connect, a web application matching students to professionals using a custom algorithm
- The matching algorithm used mentee and mentor data retrieved from SQLite to compare their common interests and availability (Python).
- Developed and integrated backend APIs (Node.js) with frontend UI (React), enabling real-time match suggestions and profile views
- Utilized technologies including React, Node.js, Git, and SQLite for full-stack development : [Link](#)

Virtual Ruler – Backend Developer

Jan 2025 - May 2025

- Developed a mobile ruler app with accurate measurements based on device dimensions using Swift
- Collaborated with team members to ensure smooth UI integration and resolved bugs to maintain code consistency across contributions
- Managed merge conflicts and coordinated version control to streamline team workflow : [Link](#)

Library App - Software Developer

Jan 2024 - May 2024

- Developed a fully functioning library application allowing users to create accounts(Java, SQLite), check out and return books, and search the catalog
- Implemented inventory tracking to manage and display in-stock book availability(Java, SQLite)

Tech Store – Backend Developer

Nov 2024 - Dec 2024

- Developed and deployed RESTful APIs using Python and MongoDB for a tech store web application
- Enabled key features including product listings, user accounts, and purchase cart viewing
- Collaborated with the frontend team to integrate backend services into a seamless user interface (React)
